DETAILED ACTION

This notice of allowance in response to the amendments filed 16 January 2009.
Claim 31-33 are currently amended. Claims 34-35 are new. Claims 29-35 are allowed.

Response to Amendment

Examiner notes the amendments to the claims filed in response to the Interview conducted with Applicant's representative, Michael K. O'Neill (Reg. No. 32,622) on 14 January 2009.

The rejection of claims 29-32 under 35 USC § 112, second paragraph, is withdrawn in light of the amendments.

The rejection of claim 33 under 35 USC 101 is withdrawn, in light of the amendments.

Allowable Subject Matter

Claims 29-35 are allowed. Pursuant to 37 CFR 1.109 and MPEP 1302.14, the following is an Examiner's Statement of Reasons Allowance. Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statements of Reasons for Allowance".

Claim 29 is regarding a method for transferring job data in a digital cable network system wherein the prior art of record not disclose or fairly suggest the claimed transfer of job data in a digital cable network system, wherein there is a determination of a manner of transfer which includes referential transfer or direct transfer, and wherein in the referential transfer, the sending component uploads job data to a predetermined location on a secure server and sends location information corresponding to the secure server to the receiving component, and wherein the uploaded job data is received by the receiving component from the predetermined location on the secure server, in which the uploaded job data is received in accordance with a request from the receiving component which includes the location information. Therefore, the Examiner asserts that this feature is patentably distinct and non-obvious over the prior art.

Claims 31 and 34 are regarding a sending component apparatus for transferring job data in a digital cable network system wherein the prior art of record not disclose or fairly suggest the claimed transfer of job data in a digital cable network system, wherein there is a determination of a manner of transfer which includes referential transfer or direct transfer, and wherein in the referential transfer, the sending component uploads job data to a predetermined location on a secure server and sends location information corresponding to the secure server to the receiving component, and wherein the uploaded job data is received by the receiving component from the predetermined location on the secure server, in which the uploaded job data is received in accordance

with a request from the receiving component which includes the location information. Therefore, the Examiner asserts that this feature is patentably distinct and non-obvious over the prior art.

Claim 33 is regarding a computer-readable storage memory medium employed for transferring job data in a digital cable network system wherein the prior art of record not disclose or fairly suggest the claimed transfer of job data in a digital cable network system, wherein there is a determination of a manner of transfer which includes referential transfer or direct transfer, and wherein in the referential transfer, the sending component uploads job data to a predetermined location on a secure server and sends location information corresponding to the secure server to the receiving component, and wherein the uploaded job data is received by the receiving component from the predetermined location on the secure server, in which the uploaded job data is received in accordance with a request from the receiving component which includes the location information. Therefore, the Examiner asserts that this feature is patentably distinct and non-obvious over the prior art.
